How to install Git

In this document, I show you how to install Git.

Requirements

You need to download Git from here: https://git-scm.com/.
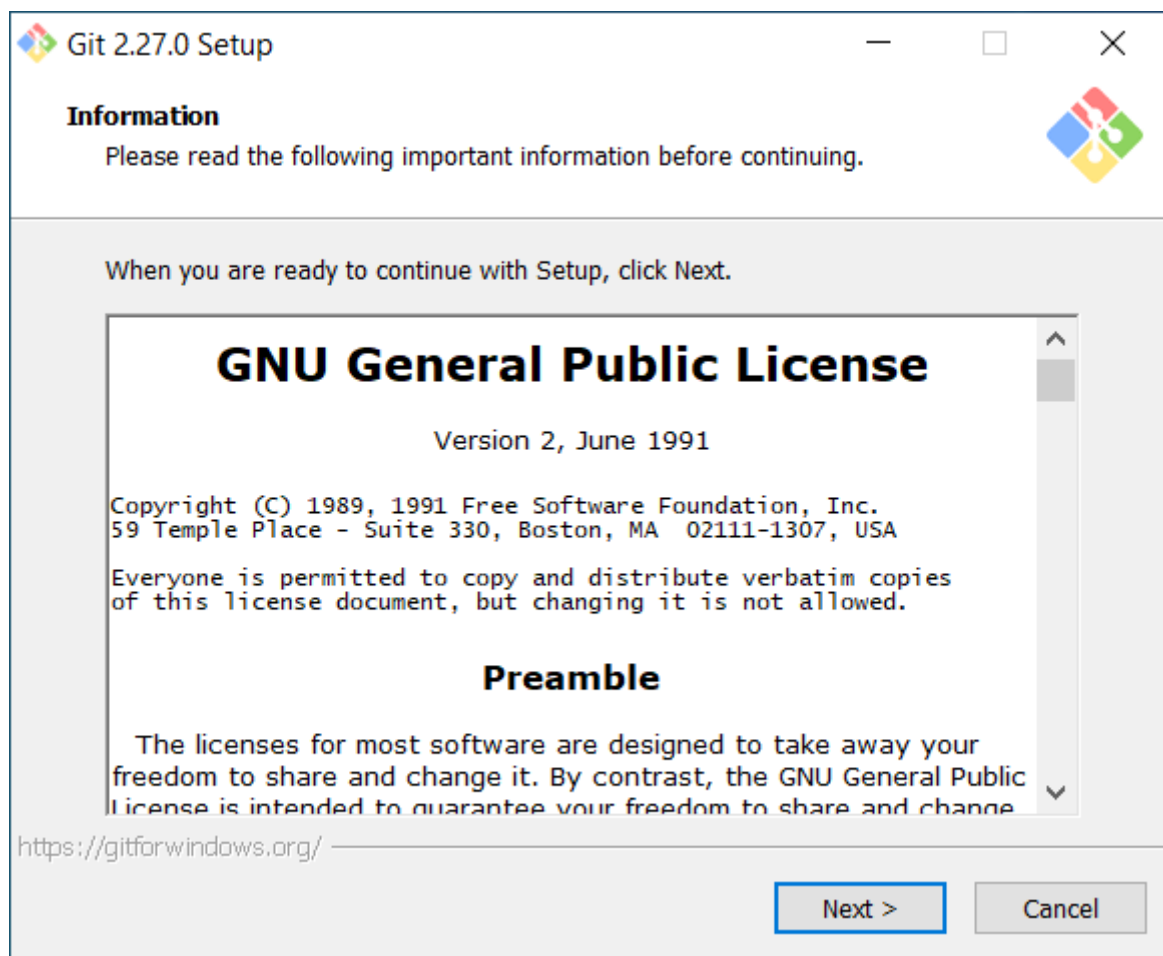

In this guide, I have installed Git 2.27.0.

Steps

Follow the below steps to install Git.
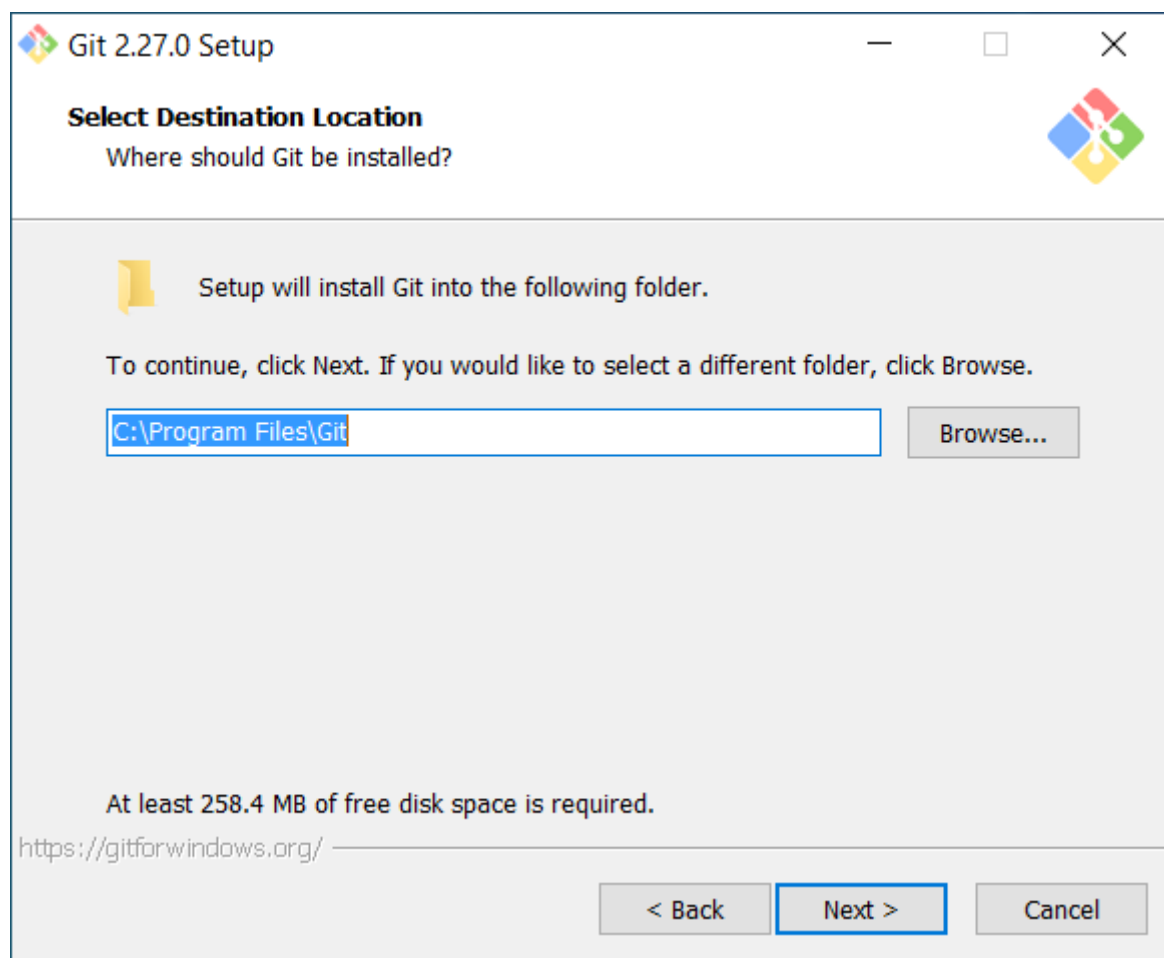

Step 1

Run the Git installer.

When done, you should see the following window:

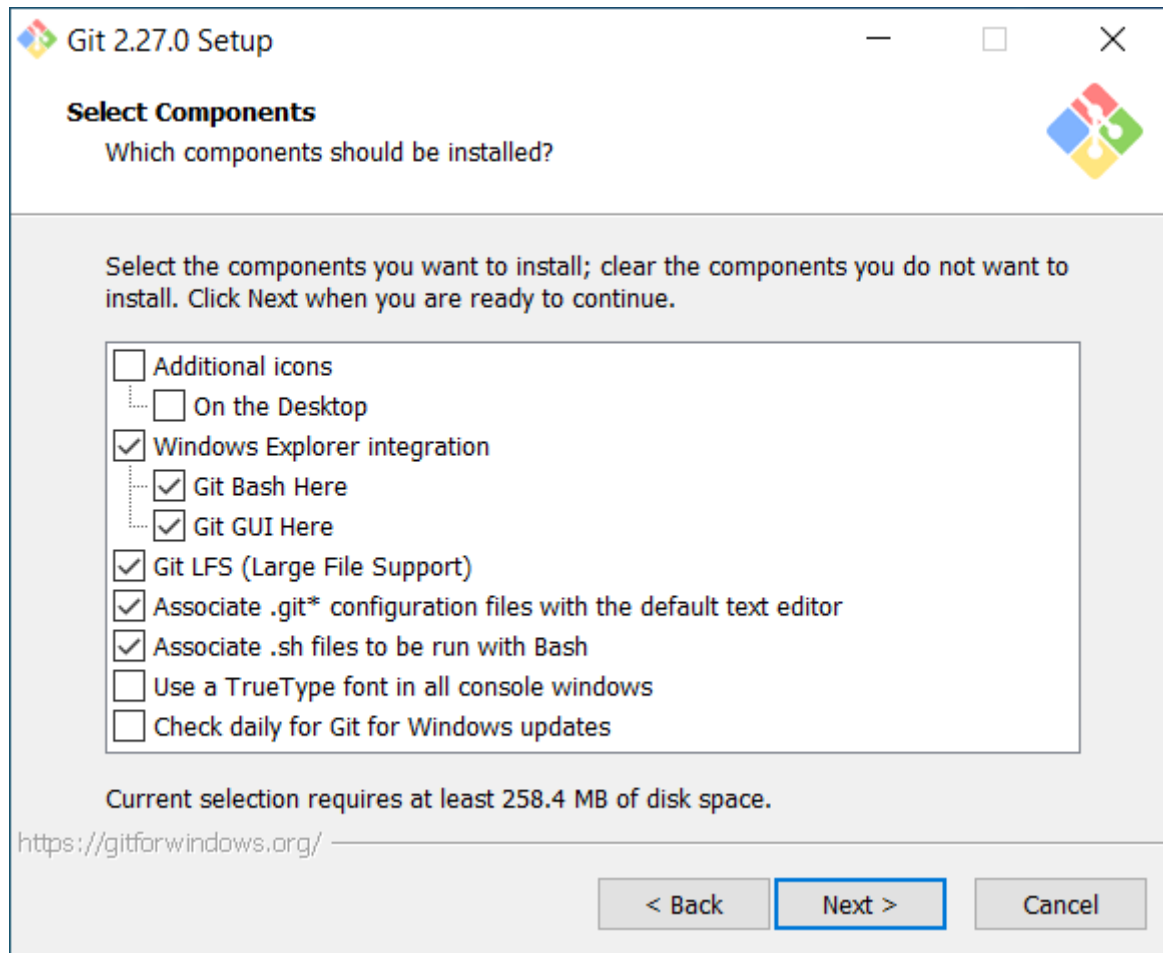

Step 2

Left click on the "Next" button.

When done, you should see the following window:

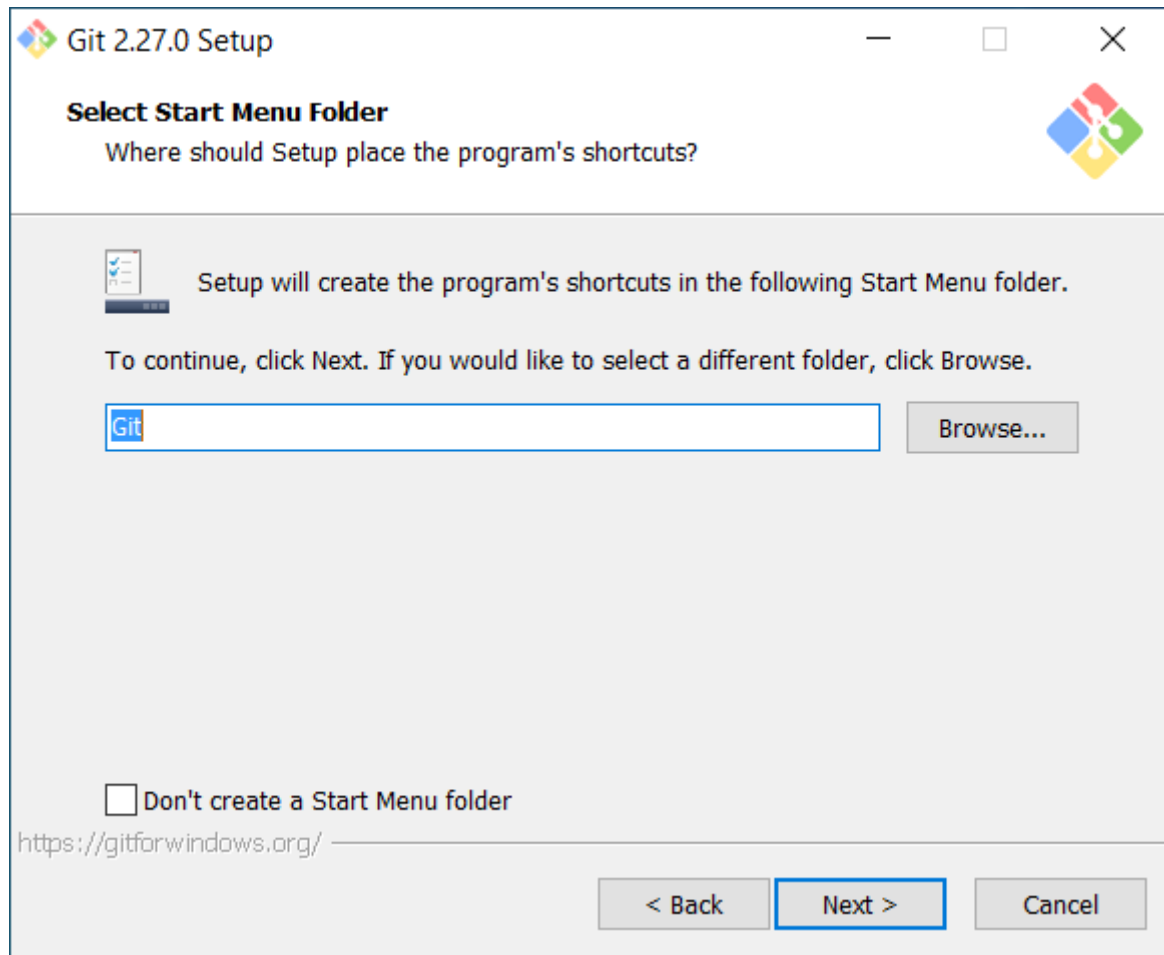

Step 3

Left click on the "Next" button.

When done, you should see the following window:
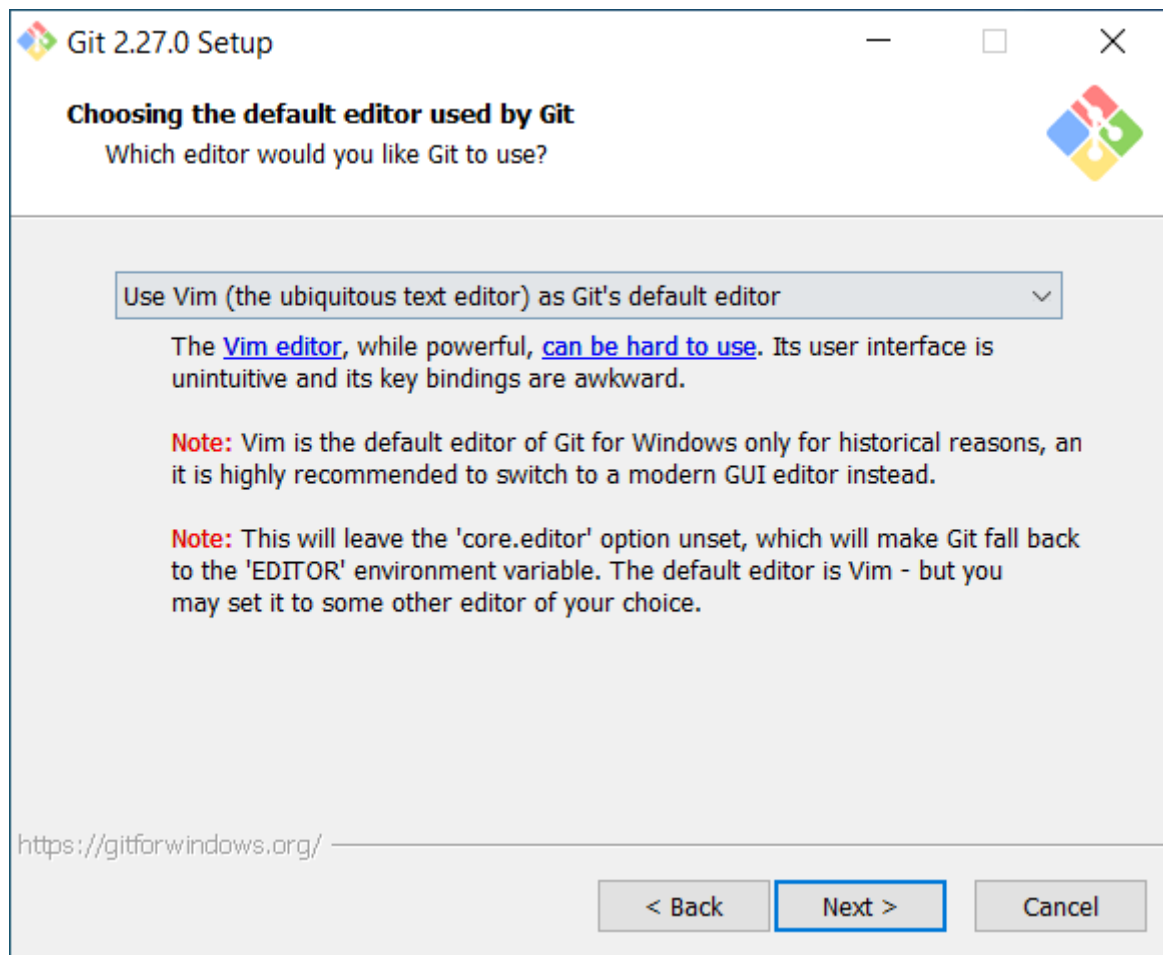

Step 4

Left click on the "Next" button.

When done, you should see the following window:
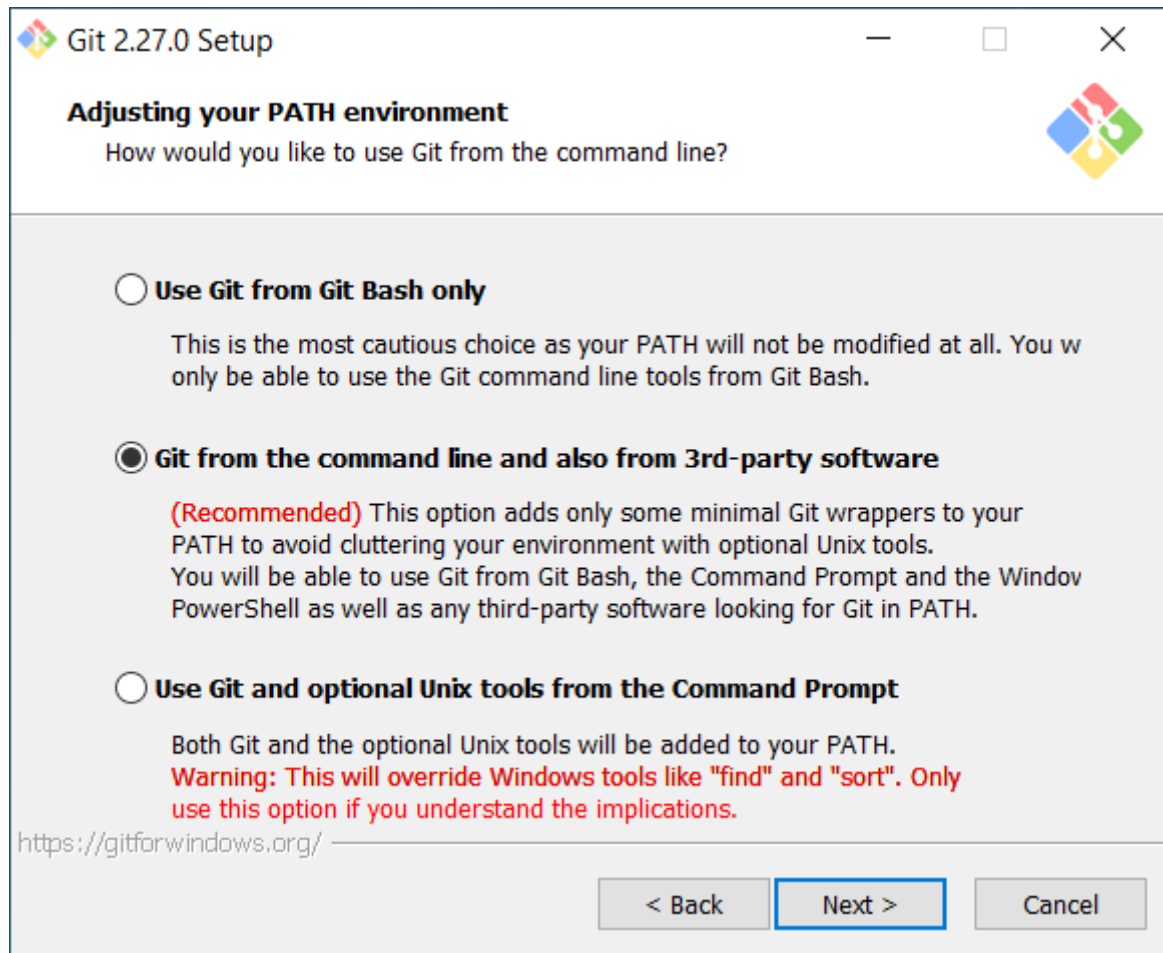

Step 5

Left click on the "Next" button.

When done, you should see the following window:
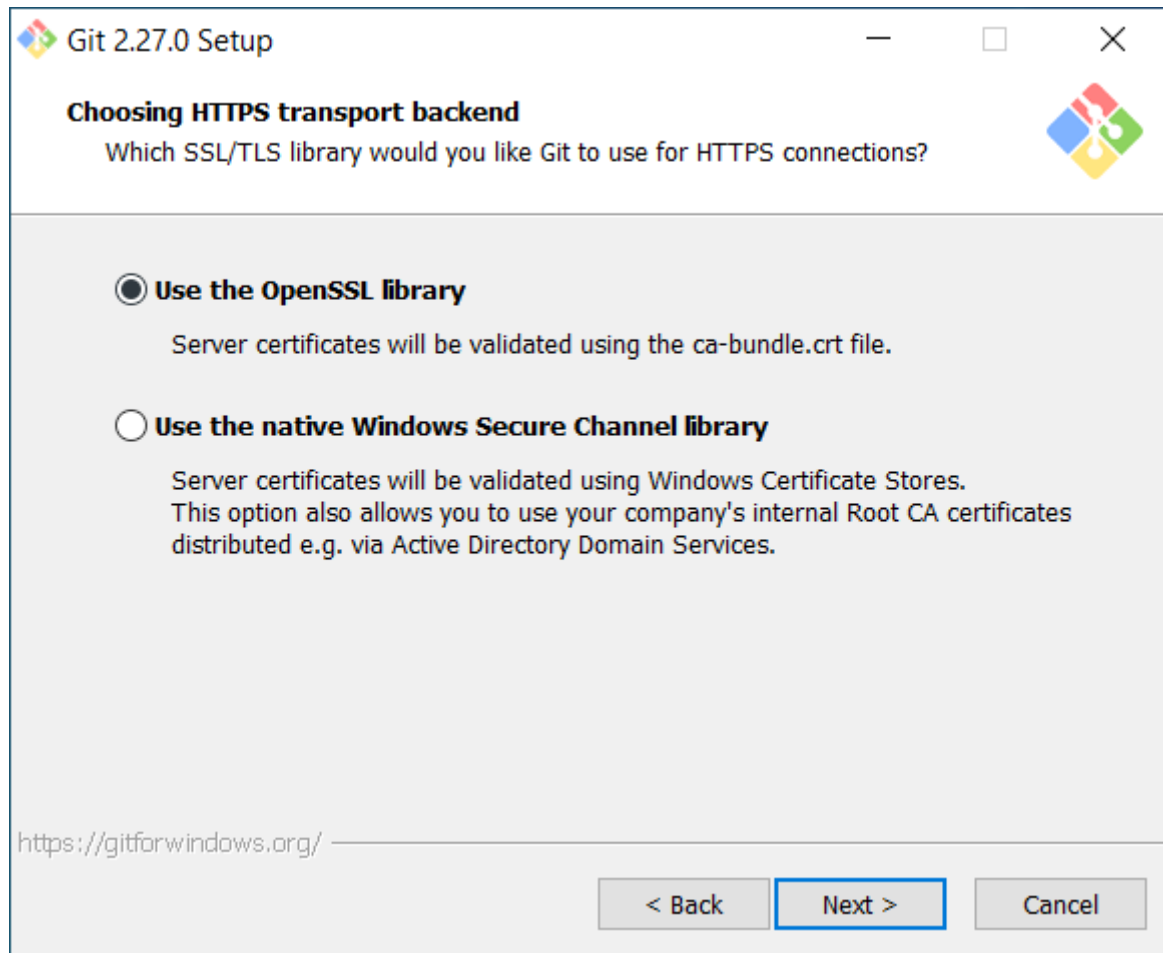

Step 6

Left click on the "Next" button.

When done, you should see the following window:
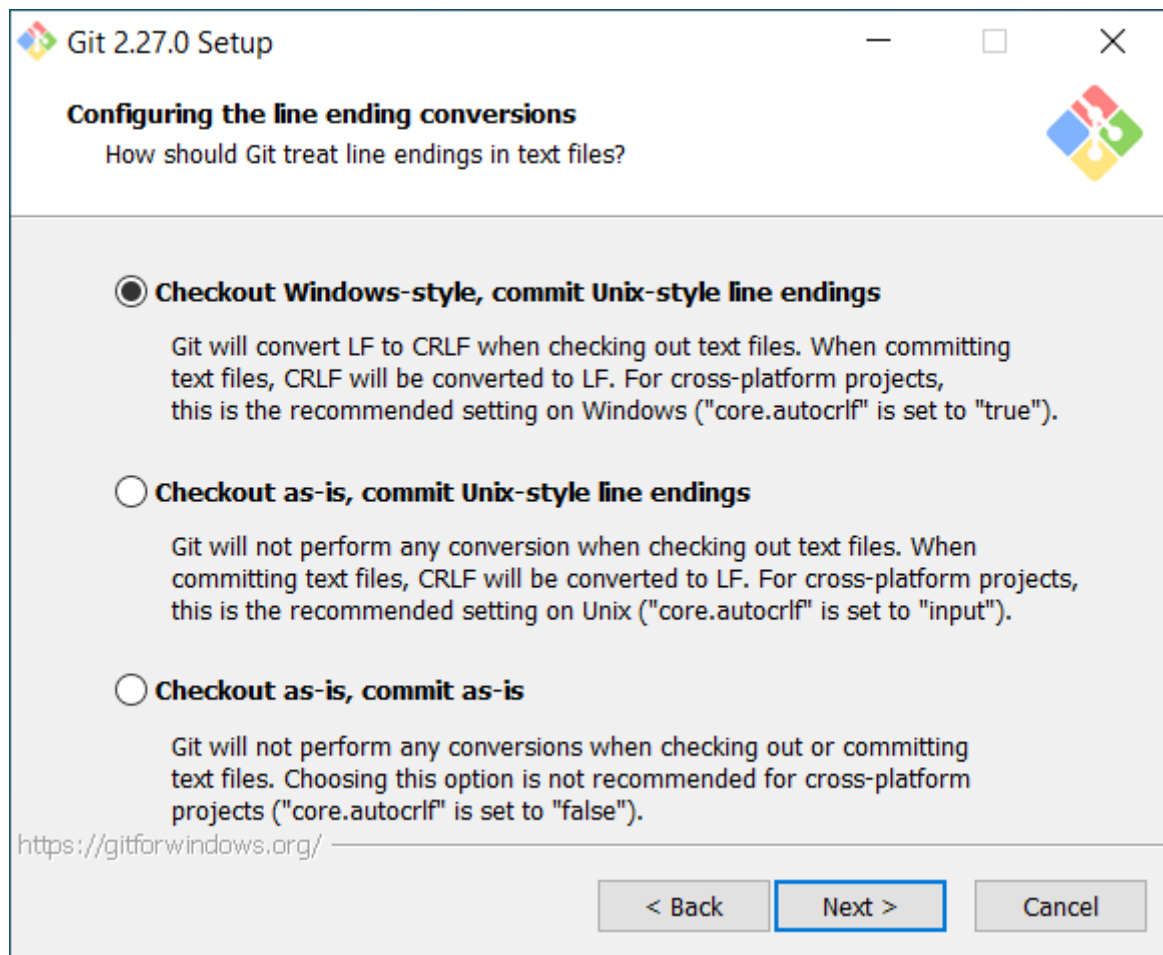

Step 7

Left click on the "Next" button.

When done, you should see the following window:

Step 8

Left click on the "Next" button.

When done, you should see the following window:

Step 9

Left click on the "Next" button.

When done, you should see the following window:
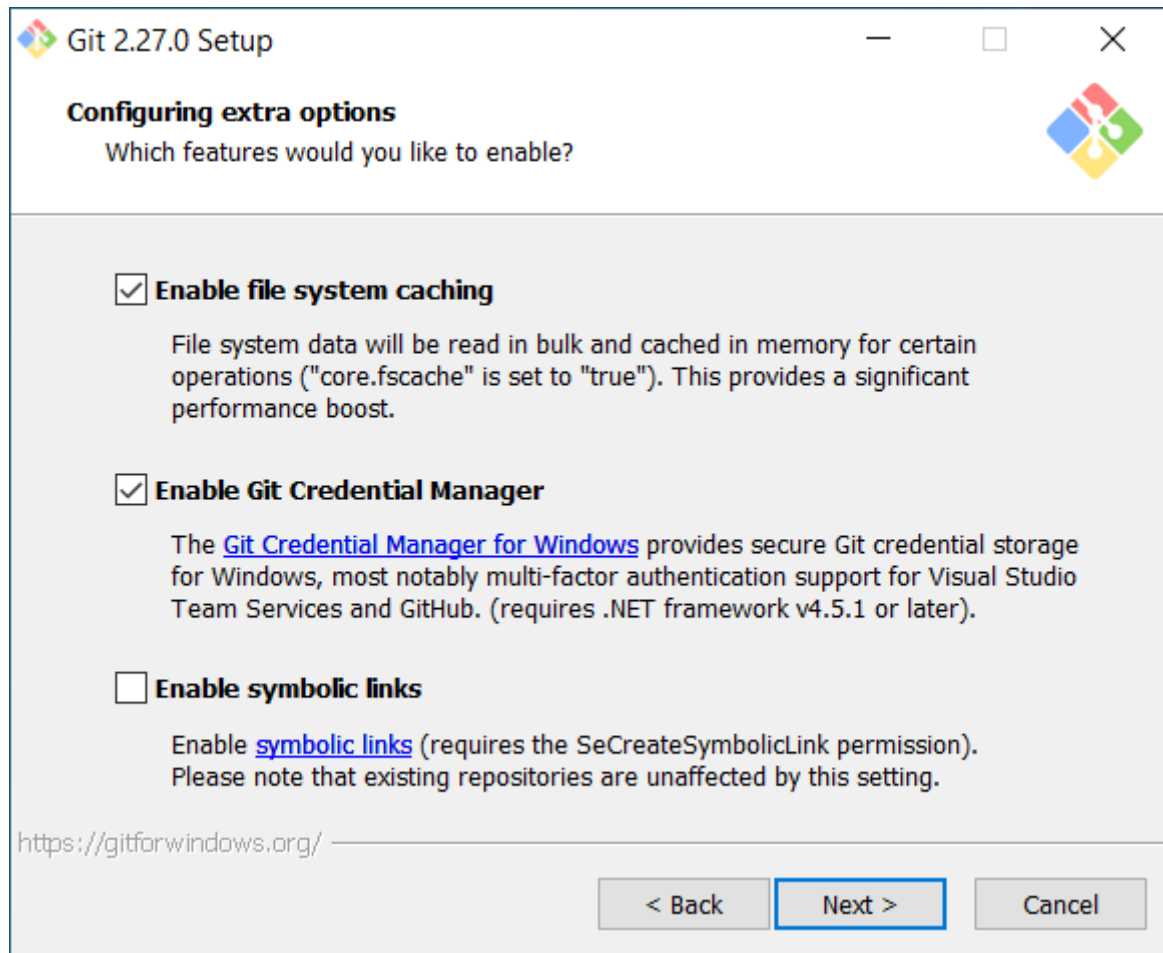

Step 10

Left click on the "Next" button.

When done, you should see the following window:

Step 11

Left click on the "Next" button.

When done, you should see the following window:

Step 12

Left click on the "Next" button.

When done, you should see the following window:
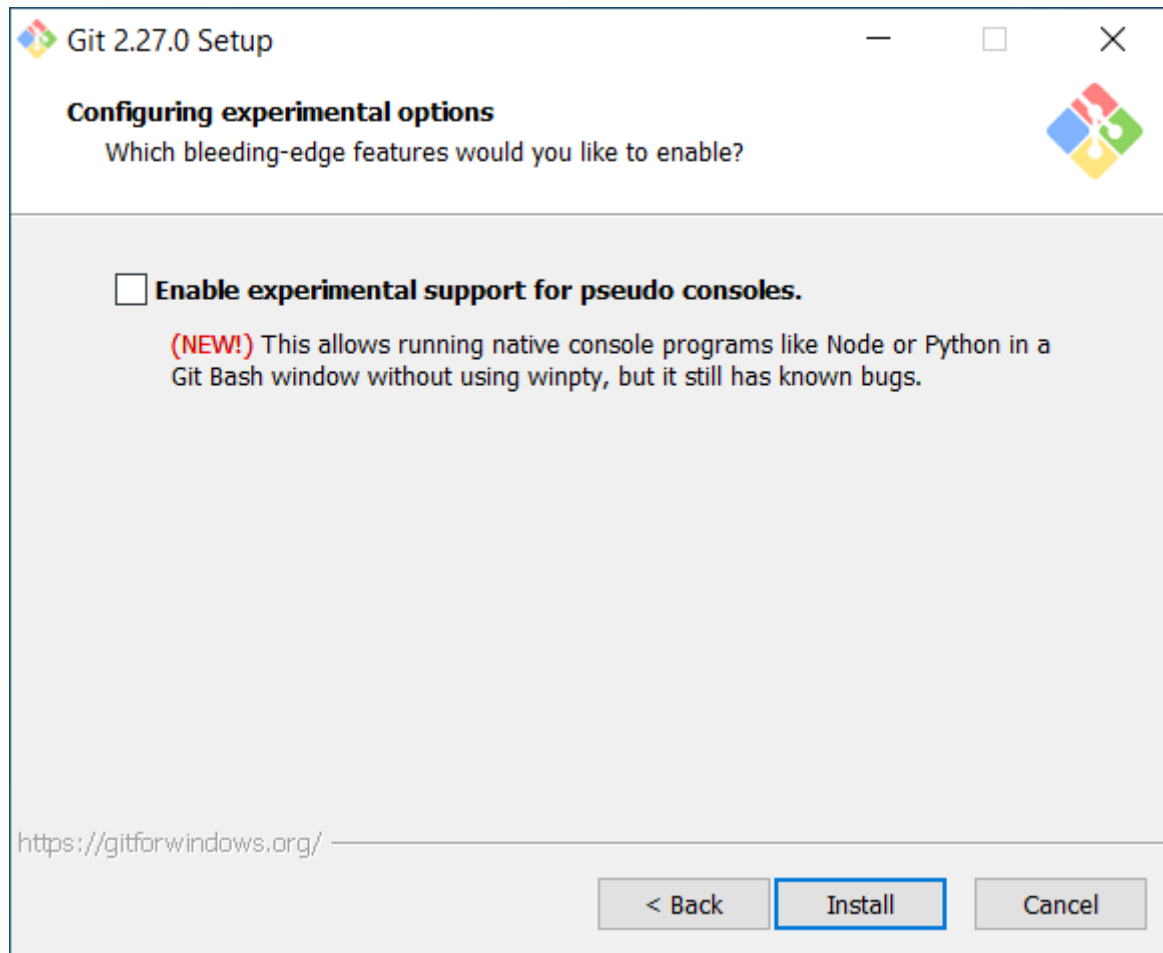

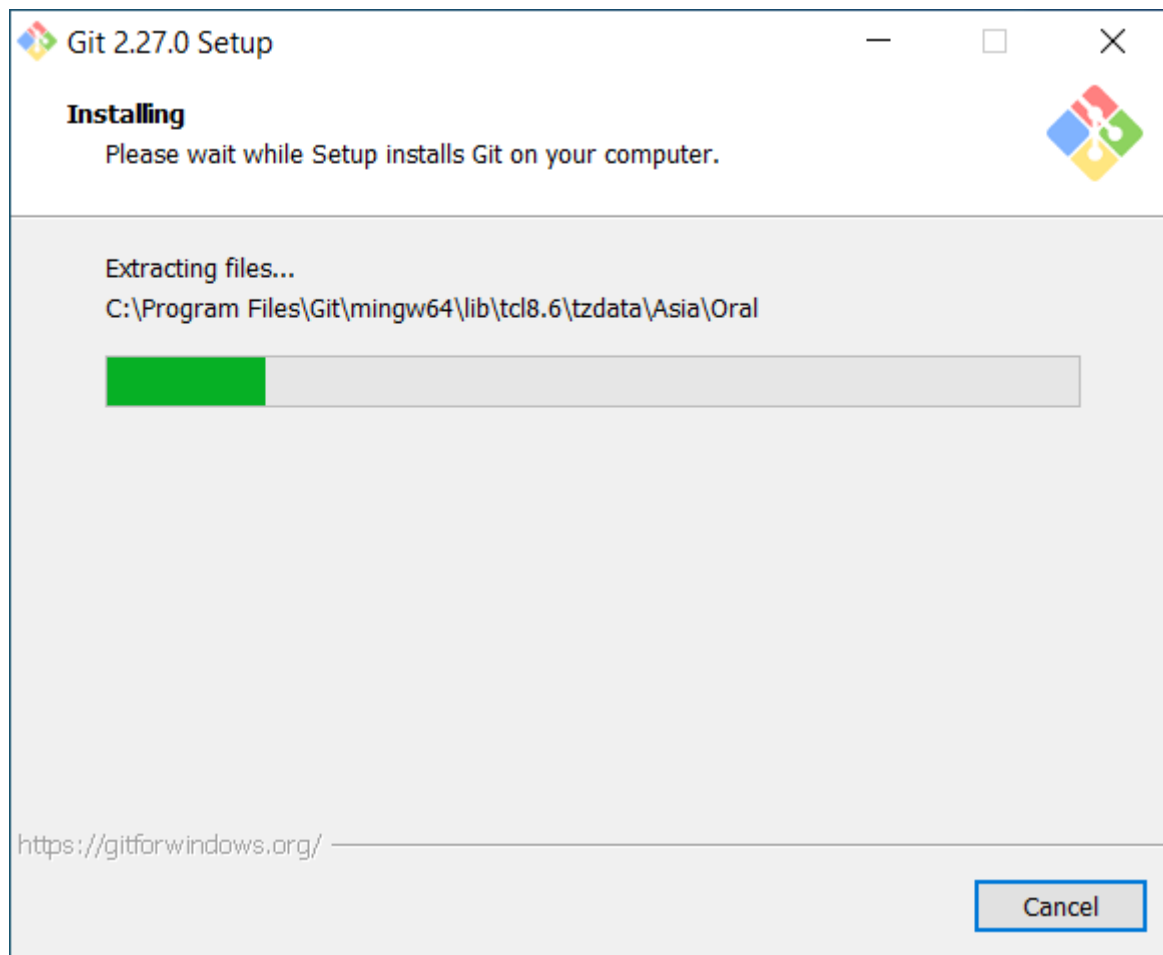

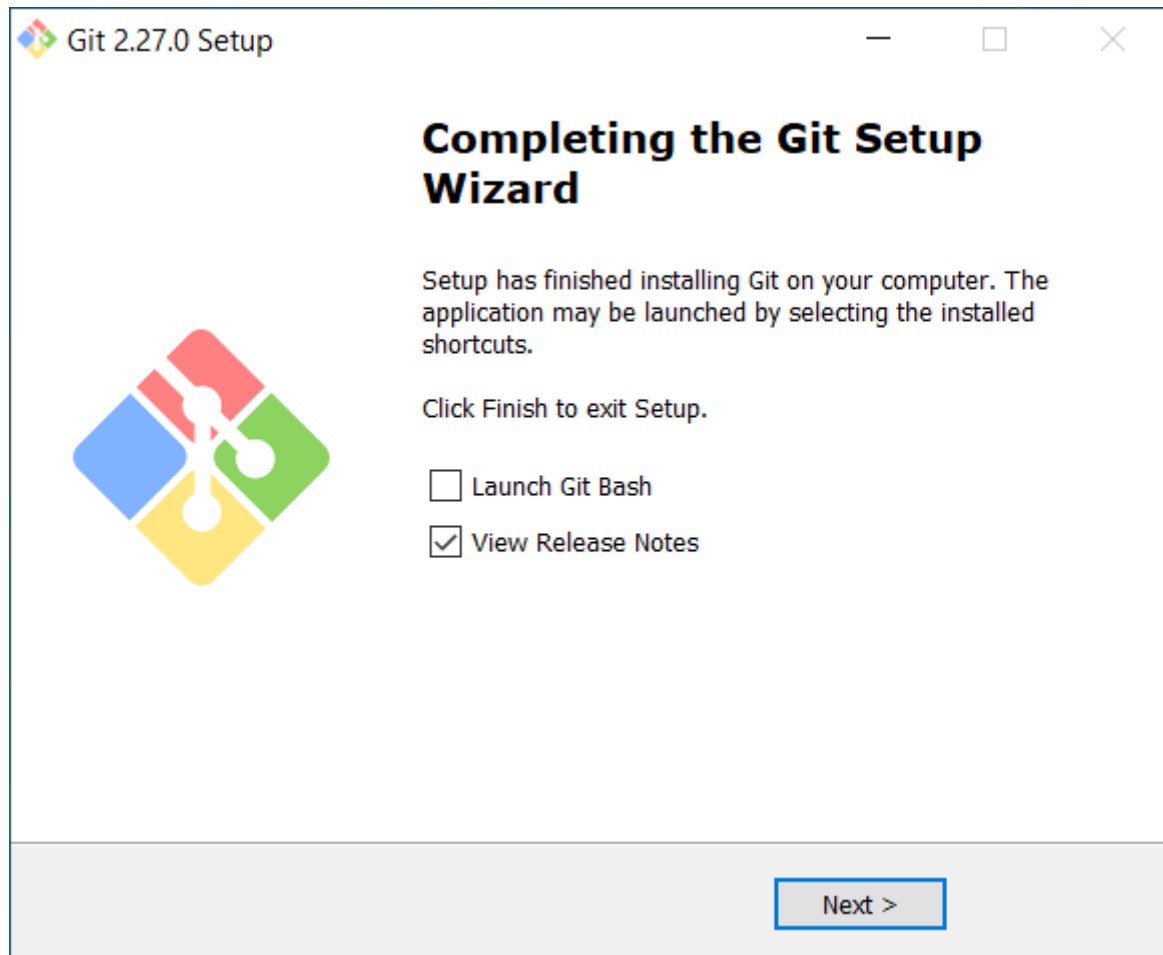

Step 13

Left click on the "Install" button.

When done, you should see the following window:

Step 14

Left click on the "Next" button.

When done, you should see the following window:

Step 15

Left click on the "Next" button.

Conclusion

If you've followed these steps correctly, you have installed Git.
